

Incident Response Plan

Incident Response Plan

Version: 2026.0, Site Reliability Engineering

This plan defines how the company detects, escalates and reviews production incidents. It applies to all customer-facing services and internal platforms.

1. Severity Classification

1.1 SEV-1 (Critical): complete service outage or data loss. Response time: 15 minutes.

1.2 SEV-2 (Major): significant degradation affecting a subset of users.
Response time: 30 minutes.

1.3 SEV-3 (Minor): partial degradation with a workaround available. Response time: 4 hours.

1.4 SEV-4 (Cosmetic): non-functional issues. Response time: 2 business days.

2. Escalation Chain

2.1 Escalation order: on-call engineer, team lead, engineering manager, CTO.

2.2 Each escalation adds 15 minutes to the response window.

2.3 If the on-call engineer does not acknowledge within 10 minutes, the page escalates automatically.

3. Post-Incident Review

3.1 Every SEV-1 and SEV-2 incident requires a post-incident review within 5 business days.

3.2 The review must produce action items with owners and due dates.

3.3 Action items are tracked until closure; overdue items are escalated to the engineering manager.

4. Communication

4.1 Status updates are posted to the status page every 30 minutes during SEV-1 incidents.

4.2 A final incident summary is sent to affected customers within 24 hours of resolution.

5. Drills

5.1 Chaos drills are run monthly against the staging environment.

5.2 A full disaster recovery drill is conducted every quarter and reported to the SRE director.
